

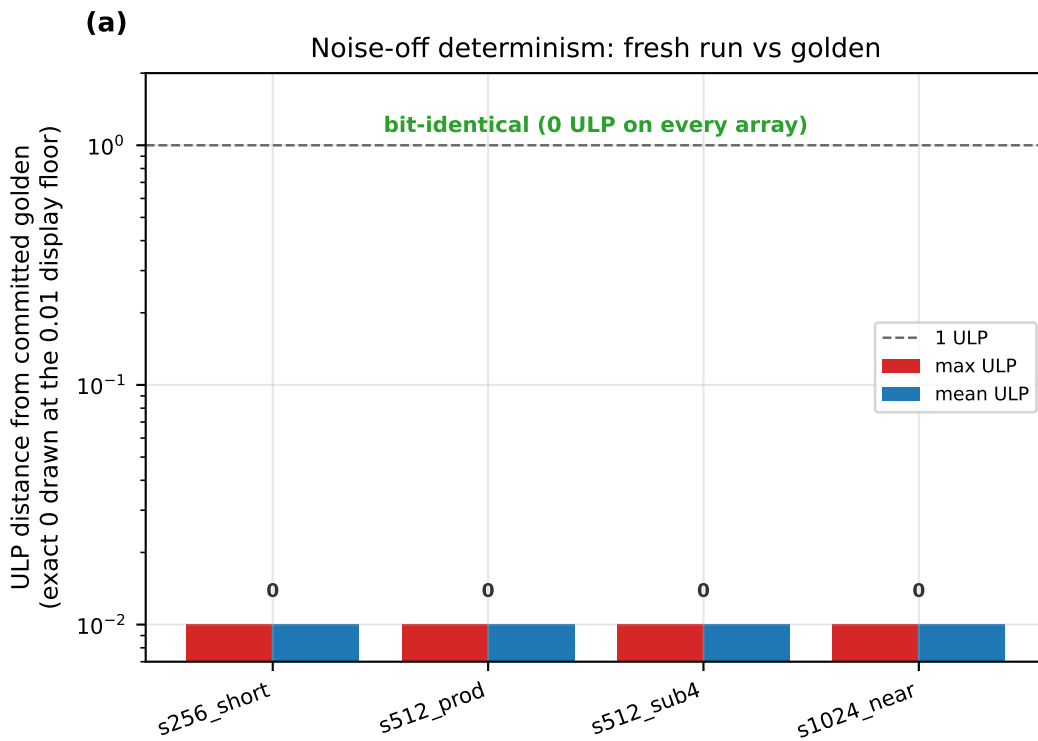

Figure 1 — Solver verification

(b)

Analytic CW residual vs detuning

input artifact not committed

validation/analytic_cw.py writes no JSON artifact.

run: python -m validation.figures.fig_analytic_cw
or: --recompute-heavy to build it here

(c)

Observed order of accuracy (3 configurations)

input artifact not committed

validation/convergence.py writes no JSON artifact, and the study (dt ladder; 256 realizations for the weak order) is far past the 60 s recompute bar.

run: python -m validation.figures.fig_convergence
or: --recompute-heavy to build it here

(d)

Weak order, noise on

input artifact not committed

validation/convergence.py writes no JSON artifact, and the study (dt ladder; 256 realizations for the weak order) is far past the 60 s recompute bar.

run: python -m validation.figures.fig_convergence
or: --recompute-heavy to build it here
